

Do/Don't

- Do **retrieve selected elements only**
rather than retrieving an entire collection and filtering afterwards
- Do **define primary keys**
rather than relying on auto-generated ones
- Do **split data into different collections**
rather than storing list attributes
- Do **create join collections** whenever appropriate
(only for NoSQL database without performant join feature)

Retrieving collections with paginated results

- ➡ Only retrieve what you need from a potentially large collection

Examples

```
GET /messages[?page=0]
```

```
GET /messages?page=1
```

```
GET /messages[?max=100]
```

```
GET /messages?max=20
```
