

# Loops

```
let i = 0;  
while (i<100) {  
    console.log(i++);  
}
```

```
for (let i=0; i<100; i++) {  
    console.log(i);  
}
```

# First-class functions

```
function getAge() {  
    return 28;  
};
```

```
getAge();
```

or

```
const getAge = function() {  
    return 28;  
};
```

```
getAge();
```

or

```
const getAge = () => 28;  
getAge();
```

Anonymous functions will be very  
useful for object methods and  
callback methods
