

[old way] Scoping problem with strict mode

file1.js

```
"use strict";
```

```
let doSomething = function() {  
    // strict mode applies  
}
```

file2.js

```
let doSomethingElse = function() {  
    // strict mode applies too  
}
```

[old way] Encapsulate Javascript in **a closure**

```
(function() {  
    "use strict";  
  
    let private = function() {  
        // private is not available from outside  
    }  
} ());
```
