Debug message on the console

```
console.log("Houston, there is a problem");
```

Constants and Variables - var vs let

```
var name = "Alice";
                                   old way
var age = 28;
                             (should not be used)
let name = "Alice";
let age = 28;
                                 new since es6
const name = "Alice";
const age = 28;
```
