Node.js

- Runs on Chrome V8 Javascript engine

- Non blocking-IO (a.ka asynchronous, a.k.a event-driven)

- No restrictions (unlike when js is running on the browser)

Example

```
import {readfile} from 'fs'

readFile('helloworld.txt', 'utf8', function(err, data) {

    if (err) console.log(err)

    return console.log("output 1")

});

console.log("output 2")
```

console

```
$ node example.js
output 2
output 1
```
